EXHAUST

STEERING

Pete & Jake's offers three steering gear options:  
 #8000 Vega ('70-'78)  
 #8001 Saginaw model #122 (mid-60's Chevelle)  
 #8002 Saginaw power #605 (intermediate GM)

Clearance can become a problem with certain steering box/exhaust manifold applications. The following is a list of exhaust applications that have been tested by Pete & Jake's and are known to be acceptable:

BOLT PLATE (#6000) TO ORIGINAL STEERING MOUNT, AS SHOWN, THROUGH HOLES A, B, & C. (USE LONGEST BOLT FOR LOCATION "C").

Note: When installing #6000 mount onto '42-'48 Ford passenger car, elongate the slots to 1/2" to 5/8". (See illustration.)
